CS 352 Homework
Nogramming

1   Overview

Your responsibility in this homework is to produce some creative work that's related to the concepts of computer architecture but is not itself code.

2   Requirements

To complete this homework, please do the following:

1. Create some artifact related to computer architecture. The following items are artifacts: book reviews, ballads, drawings, sculptures, comics, games, movies, interactive tutoring tools, alternative implementations of hardware components (e.g., a binary adder made of cheese), fiction, or a smart appliance that uses an embedded device like an Arduino or Raspberry Pi. Other things may be classified as artifacts too. Code may be used to create your artifact, but unlike a homework assignment, the artifact can not just be code. Run your idea for an artifact by your instructor before you create it.

2. Your artifact should not appear like it was hastily scrapped together at the last minute.

3   Submission

Publish your artifact in a Piazza post, documenting your creative process and the final product using text, pictures, and video. Post under folder nogramming.
